

Spoons Game — INST326 Final Project

This project is a text-based implementation of the card game Spoons, developed as the final project for INST326. The game is written entirely in Python and was built from scratch by the project team. It focuses on strategy, probability, and reaction timing while remaining playable entirely through the command line.

Files in This Repository

- spoons.py: The main Python script containing all game logic, including card definitions, player behavior, the game controller, and the main execution loop.
- README.pdf: Project documentation explaining how to run and use the program.

How to Run the Program

1. Make sure Python 3 is installed on your system.
2. Open a terminal in the directory containing spoons_game.py.
3. Run the program using the command:

```
python spoons.py
```

4. Follow the on-screen prompts to play the game.

How to Play the Game

Each player starts with four cards. On each turn, players draw a card, select one card to pass to the next player, and attempt to build four cards of the same rank. When a player achieves four-of-a-kind, a timed spoon scramble is triggered. All players attempt to grab a spoon, and the

slowest player receives a letter. Players are eliminated after receiving five letters. The last remaining player wins.

Annotated Bibliography

Bicycle Cards. (n.d.). How to Play Spoons. Used as a reference to understand the traditional rules and structure of the game.

Python Documentation. (n.d.). Standard library modules such as random, time, and collections were referenced to correctly use built-in Python functionality.

<u>Attribution Table</u>		
Method / Function	Primary Author	Techniques Demonstrated
evaluate_hand_strength	Juanita Asenso	Sorting with arguments
update_score_and_eliminate	Juanita Asenso	Dictionary iteration with tuple unpacking
spoon_event	Ayushi Bhola	Key function with sorted()
SpoonsGame.run	Ayushi Bhola	Composition of classes
choose_card_to_pass	Tylor Davis	Set operations
Card class magic methods	Tylor Davis	f-strings
Deck.__len__	Michael Miceli	Magic methods
Player.__init__	Michael Miceli	Optional parameters
